## 1. Overview

This document describes the packages and features that are supported in Amlogic A113D/A113X chips.

It includes:

- Supported Boards
- How to Get Code and Compile the System
- Test Reports
- Known Issues
- Player Software List
- Supported Packages
- Appendix A: Wi-Fi Enabling Procedures
- Appendix B: GStreamer Test Procedures
- Appendix C: WiFi Setup Procedures

## 2. Supported Boards

This chapter lists the reference boards that Amlogic currently supports.

### List of Supported Boards

Amlogic supports the following reference boards for Chip A113D and A113X, This section lists the features and peripherals for these boards.

#### S400 Board:

● Amlogic A113D CPU
● 1G Bytes DDR3
● SDIO WiFi/BT (AP6356S)
● ADC Key x 6
● USB 2.0 OTG
● SLC NAND 512M Bytes
● SPDIF_IN/SPDIF_OUT
● UART Interface
● Audio Interface x 2(MIC_Connector & SPK_Connector)
● LINE_IN/LINE_OUT
● IR_IN/IR_OUT
● PCIe 2.0 Port x2
● MiPi Display Interface
● Gigabit Ethernet

## Amlogic Openlinux Release Notes

---

**S400 Board Version 01**

## Amlogic Openlinux Release Notes

**S400 Board Version 03**

### S420 Board:

● Amlogic A113X CPU
● 512M Bytes DDR3
● SDIO WiFi/BT (AP6356S)
● ADC Key x 6
● USB 2.0 OTG
● SLC NAND 512M Bytes
● SPDIF_IN
● UART Interface
● Audio Interface x 2(MIC_Connector & SPK_Connector)
● LINE_IN/LINE_OUT
● IR_IN/IR_OUT

**S420 Board Version 01**

## Amlogic Openlinux Release Notes

---

**S420 Board Version 03**

## 3. System requirements

Buildroot is designed to run on Linux systems. Please use 64bit Ubuntu 12.04 or 14.04 or 16.04 version. While Buildroot itself will build most host packages it needs for the compilation, certain standard Linux utilities are expected to be already installed on the host system. Below you will find an overview of the mandatory

### Mandatory packages

#### Build tools:

- Which
- sed
- make (version 3.81 or any later)
- binutils
- gcc (version 2.95 or any later)
- g++ (version 2.95 or any later)
- bash
- patch
- gzip
- bzip2
- perl (version 5.8.7 or any later)
- tar
- cpio
- python (version 2.6 or any later)
- unzip
- rsync
- file
- Bc
- Texinfo
- libmpc.so.2
- git

#### Source fetching tools:

- wget

## 4. How to Get Code and Compile the System

### 4.1 Introduction

This document provides the openlinux notes for Amlogic buildroot reference source code release running on Amlogic reference hardware. To obtain Amlogic Buildroot reference source code, you will need to have an account to access Amlogic GIT source code repository.

### 4.2 How to Get Code

You can download Buildroot source code by running the following repo commands:

**If you are in China, please use the following method to download code so that you can quick get code.**

```
$ cd ~/<your-buildroot-repo-dir>/
$ repo init -u ssh://git@openlinux.amlogic.com/buildroot-audio/linux/manifest.git
-b buildroot-openlinux --repo-url=ssh://git@openlinux.amlogic.com/repo.git
$ repo init -m 20170831.xml
$ repo sync
```

**If you are not in China, please use the following method to download code so that you can quick get code.**

```
$ cd ~/<your-buildroot-repo-dir>/
$ repo init -u ssh://git@openlinux2.amlogic.com/buildroot-audio/linux/manifest.git
-b buildroot-openlinux --repo-url=ssh://git@openlinux2.amlogic.com/repo.git
$ repo init -m 20170831.xml
$ repo sync
```

### 4.3 Compile the System

We use repo tool to manage the source code. Previous tar package are still existed, but tar package is not a efficient source code management.

Compilation:

```
$ source buildroot/build/setenv.sh
```

You're building on Linux

Lunch menu...pick a combo:

1. mesonaxg\_s400\_32\_release
2. mesonaxg\_s400\_32\_debug
3. mesonaxg\_s400\_debug
4. mesonaxg\_s400\_release
5. mesonaxg\_s420\_32\_debug

## Amlogic Openlinux Release Notes

---

6. mesonaxg\_s420\_32\_release
7. mesonaxg\_s420\_debug
8. mesonaxg\_s420\_release

Which would you like? [Choice Number]

\$ make

Note: Do not use make -jN here as Buildroot does not support top-level parallel make.

This does not mean that Buildroot does not support parallel compilation, but just that it will handle this inside the Buildroot compilation system.

### 4.4 How to Upgrade

There are 3 ways for update.

- **Upgrade with USB\_Burning\_Tool , after version 2.0.9,include this version.**

1. Copy aml\_upgrade\_package.img to your PC.
2. Install the usb device driver for the board and usb burning tool on your PC.
3. Connect the USB cable between PC and board.
4. With uboot burned on your platform, under uboot command line mode,execute “update”, then enter usb burning mode.  
# update
5. When the status shows connection is successful, import the aml\_upgrade\_package.img.
6. Press the start button, then aml\_upgrade\_package.img will be flashed on the board.
7. When the status shows flashing is successful, unplug the USB cable and reboot.

System will boot up with kernel and root filesystem on NAND.

- **Single image burn with Flash disk**

- 1). Flash disk with one partition in vfat format
- 2). Copy u-boot.bin, dtb.img,boot.img, rootfs.ubi to Flash disk
- 3).Insert Flash disk into your platform and reboot into uboot.
- 4).Uboot burn:  
#usb\_update bootloader u-boot.bin  
#reset
- 5).dtb.img burn:  
#usb\_update \_aml\_dtb dtb.img  
#reset
- 6).Kernel burn:  
#nand erase.part boot  
#usb\_update boot boot.img  
#reset
- 7).Rootfs burn

## Amlogic Openlinux Release Notes

---

```
#nand erase.part system
#usb_update system rootfs.ubi
#reset
```

### ■ Using update command to single image burn with PC, support Linux version and Windows version

Mainly Related Informations:

Windows OS : update.exe:

Windows version of the update tool, it's command line mode so need be called at Windows' shell cmd.exe.

Linux OS : Aml\_usb\_update\_tool\_4\_ubuntu.zip:

Linux version of this update tool, only 64-bit binary is provided, can be called at Ubuntu shell terminal.

1). Copy u-boot.bin dtb.img boot.img rootfs.ubi to PC disk

2).Uboot burn:

Windows:

```
#update.exe partition bootloader u-boot.bin
```

```
#update.exe bulkcmd "reset"
```

Ubuntu:

```
#update partition bootloader u-boot.bin
```

```
#update bulkcmd "reset"
```

3).dtb.img burn:

Windows:

```
#update.exe partition _aml_dtb dtb.img
```

```
#update.exe bulkcmd "reset"
```

Ubuntu:

```
#update partition _aml_dtb dtb.img
```

```
#update bulkcmd "reset"
```

4).Kernel burn:

Windows:

```
#update.exe partition boot boot.img
```

```
#update.exe bulkcmd "reset"
```

Ubuntu:

```
#update partition boot boot.img
```

```
#update bulkcmd "reset"
```

5).Rootfs burn

Windows:

```
#update.exe partition system rootfs.ubi
```

```
#update.exe bulkcmd "reset"
```

Ubuntu:

```
#update partition system rootfs.ubi
```

```
#update bulkcmd "reset"
```

If you want to get more detail information,please check with your  
Amlogic Sales/Technical support window for latest document

### 5. A113D/A113X Audio Feature List

Module	Feature Description	Status
TDM in	i2s/pcm mode	Verified
	different bit number	16,24,32 bit verified
	different channel number	2~16 channels verified
	different sample rate	8K~192K verified
TDM out	i2s/pcm mode	Verified
	different bit number	16,24,32 bit verified
	different channel number	2~16 channels verified
	different sample rate	8K ~192K verified
S/PDIF in	different sample rate	22K ~ 192K verified
	different bit number	16, 24,32 bit verified
S/PDIFout	different sample rate	22K ~ 192K verified
	different bit number	16,24,32 bit verified
PDM IN	different bit number	16,24,32 bit Verified
	different channel bit	1,2,4,8 channels
	different sample rate	8K ~ 48K verified

## 6.Test Reports

### Functional Test

name	test case	module case	detail	status
USB OTG		inserted or not		Pass
		read		Pass
		write		Pass
alsaplayer		wav		Pass
		mp3		Pass
		flac		Pass
		ogg		Pass
WiFi	SDIO	wifi driver		Pass
		wifi connected		Pass
		wifi ping		Pass
		wifi throughput		Pass
	PCIE	wifi driver		Pass
		wifi connected		Pass
		wifi ping		Pass
		wifi throughput		Pass
BT		bt connected		Pass
		send file		Pass
		A2DP		Pass
GPIO		PIO		Pass
		IRQ		Pass
		PULL		Pass

## Amlogic Openlinux Release Notes

<b>Multi Bootloader</b>	BL2	erase	1~7	Pass
		bad data	1~7	Pass
		half ture data	1~3	Pass
	TPL	erase	1~3	Pass
		bad data	1~3	Pass
		half ture data	1~3	Pass
<b>Ethernet</b>		Ethernet connected		Pass
		Ethernet ping		Pass
		Ethernet throughput		Pass
<b>Display</b>	OSD+GE2D	768x1024		Pass
		256x256		Pass
		1920x1080		Pass
	MiPi	lit LCD		Pass
	QT+DirectFB	QT test		Pass
<b>Airplay</b>	shairprot-syn c	play/pause		Pass
		Pre song/next song		Pass
		Volume control		Pass
		Device identification		Pass
		Play music fluncy		Pass
<b>DLNA</b>		play/pause		Pass
		Pre song/next song		Pass
		Volume control		Pass
		Device identification		Pass
		Play music fluncy		Pass
<b>UART</b>		Mutli transmission rate		Pass
<b>ADC_KEY</b>		6 keys		Pass
<b>SPDIF</b>	IN/OUT	Mutli sample rate		Pass
<b>Line in/out</b>		Mutli sample rate		Pass
		Mutli bit number		

If you want to get more detail information, please check with your Amlogic Sales/Technical support window for latest test reports.

## 7. Change List

## Amlogic Openlinux Release Notes

- 1). Add adc key function, including power key , vol+, vol- and WiFi AP/Station mode switch.
- 2). Autorun Airplay(shairport), DLNA(MediaRendererTest), Spotify(librespot) service when device startup
- 3). Autorun Bluetooth a2dp function.
- 4). Add debug version config for debugging.
- 5). Add new dts file to support DDR size 128M on S420 board.
- 6). Add VLC player for media.
- 7). Optimize QT LinuxFB to direct call GE2D interface.
- 8). Optimize sound channel map function.
- 9). WiFi SSID and Password can be wrote with special character.

## 8. Player Software List

- 1). aplay ,only support wav audio format.
- 2). alsaplayer, support mp3, ogg, flac and wav 4 audio formats.
- 3). gstreamer, support audio and video function, support mp3,flac and wav 3 audio format.
- 4). Airplay play music (shairport), iOS version 9.3.2, 10.3.2.
- 5). DLNA play music (MediaRendererTest)
- 6). Spotfy play music (librespot)
- 7). VLC play music, support mp3, ogg, flac and wav 4 audio formats.

## 9. Supported Packages

Amlogic adopts Buildroot as package management system. See <http://buildroot.org/> for more details on how it works.

### List of Supported Package

Package	Version	Description
alsa-lib	1.1.3	ALSA User space library. See <a href="http://www.alsa-project.org/">http://www.alsa-project.org/</a>
alsa-utils	1.1.3	Command line utilities for the ALSA. See <a href="http://www.alsa-project.org/">http://www.alsa-project.org/</a>
boost	1.61.0	Set of libraries for C++. See <a href="http://www.boost.org/">http://www.boost.org/</a>
brcmap6xxx		Broadcom wifi driver
busybox	1.25.1	Tiny versions of many common UNIX utilities. See <a href="http://www.busybox.net/">http://www.busybox.net/</a>
bzip2	1.0.6	Bzip compression utility. See <a href="http://www.bzip.org/">http://www.bzip.org/</a>
cairo	1.14.8	2D graphics library. See <a href="http://cairographics.org">http://cairographics.org</a>
cjson	1.2.1	ANSI-C compliant JSON parser. See <a href="http://sourceforge.net/projects/cjson/">http://sourceforge.net/projects/cjson/</a>

## Amlogic Openlinux Release Notes

dbus	1.10.16	Message bus system. See <a href="http://www.freedesktop.org/wiki/Software/dbus/">http://www.freedesktop.org/wiki/Software/dbus/</a>
dhcpcd	6.11.5	DHCP client daemon. See <a href="http://roy.marples.name/projects/dhcpcd/wiki">http://roy.marples.name/projects/dhcpcd/wiki</a>
directfb	1.7.7	Graphics library. See <a href="http://www.directfb.org/">http://www.directfb.org/</a>
dnsmasq	2.76	Network utility. See <a href="http://www.thekelleys.org.uk/dnsmasq/doc.html">http://www.thekelleys.org.uk/dnsmasq/doc.html</a>
e2fsprogs	1.43.3	Filesystem utilities for use with the ext2/3/4 filesystem. See <a href="http://e2fsprogs.sourceforge.net/">http://e2fsprogs.sourceforge.net/</a>
expat	2.2.0	Library for parsing XML written in C. See <a href="http://expat.sourceforge.net/">http://expat.sourceforge.net/</a>
fbdump	0.4.2	Tools to captures the contents of framebuffer device. See <a href="http://www.rcdrummond.net/fbdump/">http://www.rcdrummond.net/fbdump/</a>
fbgrab	1.3	Framebuffer screenshot program. See <a href="http://freecode.com/projects/fbgrab">http://freecode.com/projects/fbgrab</a>
fbset	2.1	Fbset. See <a href="http://users.telenet.be/geertu/Linux/fbdev/">http://users.telenet.be/geertu/Linux/fbdev/</a>
fbterm	1.7.0	Framebuffer based terminal emulator. See <a href="http://code.google.com/p/fbterm/">http://code.google.com/p/fbterm/</a>
fb-test-app	rosetta-1.1.0	Test suite for Linux framebuffer. See <a href="https://github.com/prpplague/fb-test-app">https://github.com/prpplague/fb-test-app</a>
fontconfig	2.12.1	Font configuration and customization library. See <a href="http://www.freedesktop.org/wiki/Software/fontconfig/">http://www.freedesktop.org/wiki/Software/fontconfig/</a>
freetype	2.7.1	Fonts rendering library. See <a href="http://www.freetype.org">http://www.freetype.org</a>
gdb	7.10.1	GNU debugger. See <a href="https://www.gnu.org/software/gdb/">https://www.gnu.org/software/gdb/</a>
gmp	6.1.2	Library for arbitrary precision arithmetic. See <a href="https://gmplib.org/">https://gmplib.org/</a>
gnutls	3.5.8	Transport Layer Security Library. See <a href="http://www.gnutls.org/">http://www.gnutls.org/</a>
gst1-plugins-bad	1.10.4	Gstreamer bad set. See <a href="http://gstreamer.freedesktop.org/modules/gst-plugins-bad.html">http://gstreamer.freedesktop.org/modules/gst-plugins-bad.html</a>
gst1-plugins-base	1.10.4	See <a href="http://gstreamer.freedesktop.org/modules/gst-plugins-base.html">http://gstreamer.freedesktop.org/modules/gst-plugins-base.html</a>
gst1-plugins-good	1.10.4	See <a href="http://gstreamer.freedesktop.org/modules/gst-plugins-good.html">http://gstreamer.freedesktop.org/modules/gst-plugins-good.html</a>
gst1-plugins-ugly	1.10.4	See <a href="http://gstreamer.freedesktop.org/modules/gst-plugins-ugly.html">http://gstreamer.freedesktop.org/modules/gst-plugins-ugly.html</a>
gstreamer1	1.10.4	Gstreamer. See <a href="http://gstreamer.freedesktop.org/">http://gstreamer.freedesktop.org/</a>
harfbuzz	1.4.2	Opentext shaping engine. See <a href="http://www.freedesktop.org/wiki/Software/HarfBuzz/">http://www.freedesktop.org/wiki/Software/HarfBuzz/</a>
icu	58.2	International Components for Unicode. See <a href="http://site.icu-project.org/">http://site.icu-project.org/</a>
iw	4.9	nl80211 based utility for wireless devices. See <a href="http://wireless.kernel.org/en/users/Documentation/iw">http://wireless.kernel.org/en/users/Documentation/iw</a>
kmod	23	Kernel module tools. See

## Amlogic Openlinux Release Notes

sqlite	3160200	SQL database engine. See <a href="http://www.sqlite.org/">http://www.sqlite.org/</a>
taglib	1.11.1	Audio tags. See <a href="https://taglib.github.io/">https://taglib.github.io/</a>
util-linux	2.29.2	Essential utilities for Linux. See <a href="https://www.kernel.org/pub/linux/utils/util-linux/">https://www.kernel.org/pub/linux/utils/util-linux/</a>
wavpack	5.1.0	Open audio codec. See <a href="http://www.wavpack.com/">http://www.wavpack.com/</a>
wpa_supplicant	2.6	See <a href="http://hostap.epitest.fi/wpa_supplicant/">http://hostap.epitest.fi/wpa_supplicant/</a>
Shairport-sync	3.0.1	<a href="https://github.com/mikebrady/shairport-sync">https://github.com/mikebrady/shairport-sync</a>
boa	0.94.14rc21	<a href="http://www.boa.org">http://www.boa.org</a>
Upnp-app	1.0.0	vendor/amlogic/external/platinum/upnp-app/src
wifi-fw		Wifi DSP firmware
zlib	1.2.11	Data compression library. See <a href="http://www.zlib.net/">http://www.zlib.net/</a>

## 10. Appendix A: SDIO Interface Wi-Fi Enabling Procedures

The appendix describes procedures for enabling Wi-Fi on Amlogic Linux platform manually:

- Check module existence:

```
# lsmod
```

Module	Size	Used by	Not tainted
dhd	410618	0	

If not,

```
# modprobe dhd
```

**Note:** “dhd” is the driver module name for broadcomm WIFI module. This name may vary depends on different WIFI modules equipped on your platform.

- Set up /etc/wpa\_supplicant.conf:

Example:

```
ctrl_interface=/var/run/wpa_supplicant
ctrl_interface_group=0
ap_scan=1
```

```
network={
    ssid="myAP"
    pairwise=CCMP TKIP
    group=CCMP TKIP
    proto=WPA RSN
    key_mgmt=WPA-PSK
    priority=5
    psk="my_passwd"
}
```

- Restart wpa\_supplicant:

```
# /etc/init.d/S42wifi reload
```

or enable wpa\_supplicant directly:

## Amlogic Openlinux Release Notes

---

- `# wpa_supplicant -B -Dnl80211 -iwlan0 -c/etc/wpa_supplicant.conf`  
● Enable DHCP client:  
`# dhcpcd`
- Put your `wpa_supplicant.conf` under `/board/amlogic/mesonaxg_XXX/rootfs/etc/` and regenerate your file system. Next time system will automatically enable Wi-Fi.

## 11. Appendix B: GStreamer Test Procedures

This appendix demonstrates how to use `gst-play-1.0` to exercise Gstreamer. ( For non-X platforms only )

### I. Local file playback

`gst-play-1.0 file.mp3`

### II. Play audio and video file (connected mipi display screen)

`gst-play-1.0 file.mp4`

Playing back a playlist:

`gst-play-1.0` can take commands `k` to show command list during playback.

Interactive mode - keyboard controls:

space	: pause/unpause
q or ESC	: quit
> or n	: play next
< or b	: play previous
?	: seek forward
?	: seek backward
?	: volume up
?	: volume down
+	: increase playback rate
-	: decrease playback rate
d	: change playback direction
t	: enable/disable trick modes
a	: change audio track

## Amlogic Openlinux Release Notes

v	: change video track
s	: change subtitle track
0	: seek to beginning
k	: show keyboard shortcuts

## 12. Appendix C: WiFi Setup Procedures.

This appendix demonstrates how to switch mode between WiFi AP mode and WiFi Station mode.

I. After the device is upgraded, WiFi will auto enter AP mode. You can use web to send SSID and Password to device, it will connect to WiFi AP.

Step1:

Open WLAN on your phone or your tablet PC , you can find AP, its name is "amlogic-audio", please to connect it, password is "12345678", you will look the following picture.

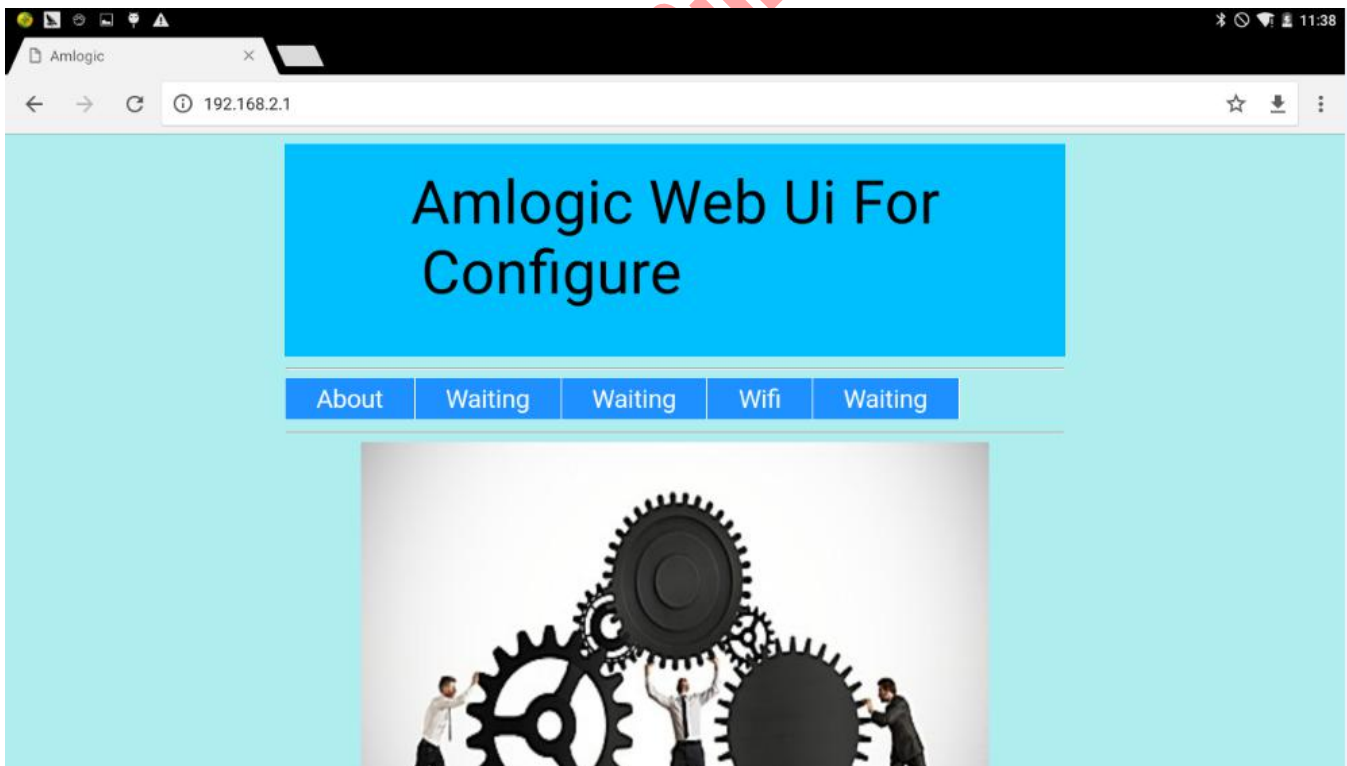

## Amlogic Openlinux Release Notes

---

Step2:

Open web app to setup WiFi, please input the URL : 192.168.2.1 ,and then click search button, you will find the following picture.

# Amlogic Openlinux Release Notes

## Step 3:

Please click WiFi button, you can look wifi config surface, please input SSID and Password that you want to connect to AP. And then click sure button , WiFi will auto enter station mode and connect to AP that you set.

192.168.2.1/web\_frame.html X

192.168.2.1/web\_frame.html

### WIFI LIST

Flash

signal

### Configure

Input ssid chrysalis

Input psk buyaocaimima256

sure back Reset

1.You should not input nothing befor select sure

2 You should with less to use reset feature

### Connected Status

Flash

Selected interface 'wlan0'

wpa\_state=DISCONNECTED

ip\_address=192.168.2.1

address=ac:83:f3:bd:bc:17

### User Guide

1.You are in ap mode when startup.Input ssid and psk then touch sure and to station.There is nothing shows on connected status when in ap mode

2.when you in station mode you can directly config wifi and you can get connected status

## Amlogic Openlinux Release Notes

---

II. If you want to enter AP mode again, you can long press WiFi button on board when device is running. WiFi will auto switch Station mode to AP mode

### 13. Appendix D: AVS Setup And Run Procedures.

#### 1). Create your AlexaClientSDKConfig.json for Alexa Auth

Before you create your build, you'll need to install some software that is required to run `AuthServer`. `AuthServer` is a minimal authorization server built in Python using Flask. It provides an easy way to obtain your first refresh token, which will be used for integration tests and obtaining access token that are required for all interactions with AVS.

**\*\*IMPORTANT NOTE\*\***: `AuthServer` is for testing purposed only. A commercial product is expected to obtain Login with Amazon (LWA) credentials using the instructions provided on the Amazon Developer Portal for **\*\*Remote Authorization\*\*** and **\*\*Local Authorization\*\***. For additional information, see [AVS Authorization](https://developer.amazon.com/public/solutions/alexa/alexa-voice-service/content/avs-api-overview#authorization).

### Step 1: Install `pip`

If `pip` isn't installed on your system, follow the detailed install instructions [here](https://packaging.python.org/installing/#install-pip-setuptools-and-wheel).

### Step 2: Install `flask` and `requests`

For Windows run this command:

...

```
pip install flask requests
```

...

For Unix/Mac run this command:

...

```
pip install --user flask requests
```

...

### Step 3: Obtain Your Device Type ID, Cliend ID, and Client Secret

## Amlogic Openlinux Release Notes

---

If you haven't already, follow these instructions to [register a product and create a security profile](https://github.com/alexa/alexa-avs-sample-app/wiki/Create-Security-Profile).

Make sure you note the following, you'll need these later when you configure `AuthServer`:

- \* Device Type ID
- \* Client ID
- \* Client Secret

**python AuthServer/AuthServer.py /path/to/AlexaClientSDKConfig.json**

**\*\*IMPORTANT NOTE\*\*:** Make sure that you've set your **\*\*Allowed Origins\*\*** and **\*\*Allowed Return URLs\*\*** in the **\*\*Web Settings Tab\*\***:

- \* Allowed Origins: http://localhost:3000
- \* Allowed Return URLs: http://localhost:3000/authresponse

More details

in [https://developer.amazon.com/public/apis/engage/login-with-amazon/docs/adding\\_website.html](https://developer.amazon.com/public/apis/engage/login-with-amazon/docs/adding_website.html)

## 2). Donwload and to run

```
Update aml_upgrade_package.img via usb_burning tool
cp AlexaClientSDKConfig.json to /etc/
cd /usr/bin (ONLY support SampleApp from /usr/bin now )
./SampleApp /etc/AlexaClientSDKConfig.json
```
